14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed? (See Section 83(a). (If "Yes," answer 14B and 14C below.) ☐ YES ☒ NO14B. Does the applicant(s) specify that this variety be limited as to number of generations? ☐ YES ☒ NO14C. If "Yes," to 14B, how many generations of production beyond breeder seed? ☐ FOUNDATION ☐ REGISTERED ☐ CERTIFIED

The applicant declares that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate, and will be replenished periodically in accordance with such regulations as may be applicable.

The undersigned applicant(s) of this sexually-reproduced novel plant variety believes that the variety is distinct, uniform, and stable as required in Section 41 and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act.

Applicant is informed that false representation herein can jeopardize protection and result in penalties.

## INSTRUCTIONS

**GENERAL:** Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

## ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant ~~and compare it with a similar commercial variety~~ grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

## EXHIBIT A

### ORIGIN AND BREEDING HISTORY OF THE VARIETY

Cross: CORSOY x BEESON

Original cross was made in the winter of 1967-68 by Improved Variety Research between Corsoy and Beeson. Single seed descent was used to advance the generations. F1 and F4 generations were grown in Iowa, F2 and F3 in a winter nursery. Single plant selections were made in the F4 generation and the line was preliminary yield tested in 1971. The pure line was yield tested extensively in 1972 and 1973. Several hundred single plant selections were grown in 1973, and only those rows conforming to a standard type were bulk harvested. The variety is stable for characteristics of plant type and maturity.

## EXHIBIT B

### BOTANICAL DESCRIPTION OF THE VARIETY

PONTIAC (Ex 5117) is a northern, indeterminate soybean variety of maturity Group III. It matures about four days later than Beeson and it is adapted to areas of the Midwest in which Beeson and Wayne are adapted.

The flowers are purple and the pubescence gray. The seed and hilum color is yellow. The seed luster is dull. Seed size is medium.

Pontiac has better seed quality and better emergence than Beeson. Beeson has an emergence score of 5 while Pontiac has a score of 1.

## EXHIBIT D

### DATA INDICATIVE OF NOVELTY

To the breeder's knowledge, the soybean variety "Pontiac" (Ex 5117) most closely resembled the variety Beeson. Pontiac is similar to Beeson in that it has purple flower color and gray pubescence, but it can be distinguished from Beeson by:

- (1) Pontiac has yellow hilum (Imperfect black for Beeson).
- (2) Pontiac has better emergence than Beeson.
- (3) Pontiac is four days later than Beeson.
- (4) Pontiac has been higher yielding than Beeson. (See attached yield data.)
